# Enterprise Mobility

Teleca Enterprise Mobility can provide all the data required for business, immediately and everywhere.

What you need when you need it

A clear target for enterprise organisations is to reduce the average duration of the business process. In this way being more efficient in responding to market demands, enterprise organisations can gain direct competive advantages. Enterprise organisations can save costs by having a higher productivity index. Bringing IT automation on the de-facto "mobile status" of goods, employees and costumers can reduce lead time in the main business process.

Real Time Enterprise

The wireless access within our Enterprise Mobility enables a synchronisation of all business procedures, from warehouse to sales and from orders to accounts. An immediate response to customer demands whilst optimising resources, leads to increased competitiveness and customer retention.

Evolution, not Revolution

Teleca Enterprise Mobility opens a remote window within every company whilst integrating perfectly with existing systems, encouraging dynamism and flexibility. The unique advantages of our Enterprise Mobility are appreciated by IT Managers, Sales Managers, Operation and the CEO.
